

GMNJ Well Test Notification

In accordance with the Site Plan Resolution of Approval (No. 2022-07) passed by the Township's Planning Board, Green Medicine New Jersey ("GMNJ" or "Applicant"), located at 638 Brunswick Pike, will be conducting well testing in the near future. The resolution contains the following conditions that states GMNJ is to:

DD. Perform a well interference test to determine if there is any impact on neighboring wells, which shall be paid for by Applicant. Applicant will work with the Board Engineer to develop a test with the following minimum parameters:

- 1. At least four (4) wells shall be tested;*
- 2. Wells tested must be within 2,000 feet of the new GMNJ well;*
- 3. Locations to be determined by the Township Engineer (hydrogeologist) in consultation with Applicant's well driller and hydrogeologist; and*
- 4. Producing wells existing within the 2,000-foot distance from the new GMNJ well may be used as observation wells to determine well interference. If more than four (4) wells qualify as observation wells, preference will be given to the nearest wells and to those located symmetrically around the GMNJ test well or along known geologic structures.*

EE. Notify residents within 3,000 feet of new GMNJ well of the date of the interference testing.

Accordingly, residents within a radius of 3,000 feet of the above address will be notified of the well testing once the test plan is finalized and the work is scheduled. Those within 2,000 feet of the new GMNJ well may request to be considered for well testing. The Township's Engineer (Hydrogeologist) will confirm the selection of those test sites and will provide oversight of the well testing.

A summary of the testing results will be posted on the Township's website once completed.
